CV-011

Software Engineer

LayerZero Labs Ltd · Hong Kong · Engineering

Skills

Go, TypeScript, JavaScript, SQL, PostgreSQL, MySQL, Microservices, Docker, System Design, FIX protocol, PCI Compliance, RAG, Function Calling, ReAct, Amazon Web Services, Blockchain, Full-stack Development, AI, Machine Learning

Work experience

Software Engineer · LayerZero Labs Ltd

2026-02 – Present

AI-augmented engineering · oncall reliability · cost optimization for a cross-chain interoperability protocol.

- Built AI-powered oncall investigation tools - designed an agent loop that autonomously investigates incidents using provided tools, gathering context and generating structured reports without human intervention.

Identified and fixed a critical cost bug in gas price calculation - discovered that abnormal RPC nodes on inactive chains returned gas prices 600× market rate, causing extreme price fluctuation and excessive operational cost. Deployed fix to handle inactive chain price…

Senior Software Engineer · Fusang Hong Kong Limited

2023-05 – 2026-01

Built a regulated Sukuk platform from scratch.

- Led 0 -> 1 architect and builder of Blocktree - a broker crypto exchange platform with KYC (Jumio integration), member onboarding, FIX protocol messaging, and real-time WebSocket market data. End-to-end ownership from architecture to production.
- Built blockchain indexer from scratch - designed and implemented an event monitoring and data synchronization system to track on-chain activity across multiple blockchain networks, ensuring reliable data ingestion for the exchange platform.
- Led on building full-featured Member Portal - member…

Senior Backend Development Engineer · Bybit

2022-04 – 2022-12

System owner. Built a MasterCard-compliant card center from 0→1.

- Owned Bybit Card Center end-to-end 0 -> 1 - designed and built the entire card management microservice from zero, full MasterCard specification compliance.

Implemented 3D Secure 2.0 with Strong Customer Authentication (SCA) - achieving EU PSD2 compliance for the European market.

- Designed and led a junior to build card application flows, card operations dashboard, and admin panel.
- Built Customer Risk Assessment (CRA) model - automated AML compliance with the card issuer.
- Supported PCI (Issuer) Certification - contributed…

Senior Backend Development Engineer · Crypto.com

2020-08 – 2021-12

Career training and membership SaaS with 150, 000 users

- Led GBP Fiat Wallet development (>240K users) - owned application flow, deposit, and withdrawal systems.
- Extended fiat wallet to CAD (>200K users), USD (>5K), BRL (>2K) - adapted the system for multi currency operations.

Identified and fixed a critical currency conversion bug in transaction records (>1 billion rows) discovered systemic inaccuracy, diagnosed root cause, deployed fix.

- Built periodic database export pipeline (>100M rows) - designed and implemented large-scale data export automation.
- Re-architected the Fiat Wallet…

Analyst Programmer · Tradelink Electronic Commerce Limited

2018-07 – 2020-03

First job out of university. Built systems handling 250K+ requests/day.

- Designed and built Content Management System (>250K requests/day) - managed profiles, error logs, e-receipts, and terminal logs from 2, 000+ POS terminals. Built in Go with Docker and MongoDB.
- Developed SmartPOS payment applications - built Octopus payment app and contributed to Visa/MasterCard payment app on Android-based SmartPOS (used by 1, 000+ merchants), using Kotlin.
- Led 2 programmers - technical lead for CMS development team.
- Built E-Receipt System - supporting 1, 000+ terminals with Go, Docker, MongoDB.
