CV-038

AI Forward Deployed Engineer, Client Engineering

IBM · Singapore · Data & AI

Skills

AI & Agentic Systems, IBM Watsonx, LangChain, RAG Architecture, AI Agent Design, Workflow Automation, AI Governance, LLM Evaluation & Observability, Security & Identity, OAuth 2.0, OIDC, User Delegation, Zero Trust Architecture, Cloud & Infrastructure, Kubernetes, Openshift, AWS, terraform, On-Premise GPU Clusters, Programming & Tools, Python, Golang, Java, Bash/Linux, Git, CI/CD pipelines

Work experience

AI Forward Deployed Engineer, Client Engineering · IBM

2024-11 – Present

Operate as a forward-deployed engineer embedded with enterprise banking and financial services customers across APAC, running technical discovery to uncover real operational workflows and translating ambiguous, loosely-defined problems into clear technical plans and production systems.
Architected an enterprise agent governance platform for one of Asia's largest banks, integrating APIs, security controls, and distributed system components for agent oversight, observability, and user delegation; partnered with the customer's engineering, testing, and business teams to align on production…

Platform Engineer - Data Platform (OLAP Engine) · Bytedance

2023-05 – 2024-10

Managed the deployment of a B2B cloud-native data warehouse product based on Clickhouse, a distributed system serving multiple internal teams; provided L3 oncall support to troubleshoot production reliability and performance issues in real time.
Maintained critical dependencies such as ByteKV, a distributed transactional key-value store used for table schema definitions and parts metadata. Achieved a remarkable stability improvement by reducing ByteKV storage usage by 10 times and memory usage by 4 times.
Contributed to the development of Kubernetes operators to manage various database engine…

Site Reliability Engineer · Grab

2021-07 – 2023-04

Led Kubernetes migration project to deploy Elasticsearch on AWS EKS, managing 30+ production clusters across a distributed architecture. Designed and implemented the platform architecture for self-service deployments, achieving 2x search query performance improvement through pragmatic tradeoffs in sharding and query structure.
Orchestrated major version upgrade for Grab's MySQL fleet (300+ production databases), identifying critical system parameters and designing a reliable fallback strategy using AWS DMS. Maintained high uptime through proactive incident response and production performance…
