CV-030

Senior Software Engineer

Multiplier · Vietnam · Engineering

Skills

Java, Kotlin, Go, TypeScript, JavaScript, Spring Boot, Spring Batch, jooq, GraphQL, Grpc, PostgreSQL, MongoDB, Redis, ElasticSearch, Kafka, AWS, Gcp, Azure, Docker, Kubernetes, bitbucket pipelines, CI/CD, OpenAI APIs, Claude, AI Agents, Agentic Workflows, Prompt Engineering, AI-Assisted Development

Work experience

Senior Software Engineer · Multiplier

2022-03 – Present

Core contributor to building a new payroll system from scratch to support global payroll, EOR (Employer of Record), and EOR partner automation.
Identified and resolved key performance bottlenecks in legacy systems, enhancing reliability and throughput.
Played a key role in the migration from Java to Kotlin, improving code clarity and maintainability Implemented JOOQ for type-safe SQL queries and Kafka for a scalable, event-driven architecture.
Translated business requirements into technical design documents and delivered features from planning to production.
Integrated GenAI capabilities to…

Technical Team Lead · Brankas, Southeast Asia

2020-10 – 2022-03

Led an international team to design and build the Pay Product, a platform that helps merchants manage invoices and receive payments from scratch, resulting in a successful product launch.
Communicated with other third parties to help them integrate with our product.
Managed and mentored a team of 4-6 people, providing guidance on coding quality and extensibility.
Collaborated with external partners to support integrations.
Participated in client projects to deliver custom solutions.
Successfully converted a big Monolithic service to multiple Microservices with synchronous (gRPC) /…

Senior Backend Engineer · Sendo

2019-10 – 2020-10

Built and launched 15+ services from scratch, contributing to the design, development, and multi-service support of Senpay - Sendo's payment platform.
Deployed services to AWS/On-premise depending on legal requirements and product needs.
Applied Domain-Driven Design to ensure the business logic of the systems.
Applied the Command Query Responsibility Segregation (CQRS) architectural pattern that uses PostgreSQL for the write model & Elasticsearch for the reading model.
Took the responsibility to research, design, and apply Kafka with Outbox pattern to process events in exactly-once semantic…

Backend Engineer · Grab

2019-01 – 2019-10

Contributed to designing and building multi-services in GrabFood and GrabAds products.
Organized knowledge-sharing sessions for team members about Kafka and the Grab Ads ecosystem.
Worked closely with other international team members to deliver some critical products in a short period (3 months, from the requirement to live).
Improved the test coverage of the Ads projects from 30% up to 80%.
Tech Stack: Golang, Kafka, Elasticsearch, PostgreSQL, Redis.

Full Stack Developer · B2BE GSS Vietnam CO. LTD

2017-12 – 2018-12

Developed their main product: Webportal a website integration with the Electronic Data Interchange System.
Tech Stack: PHP, Codeigniter, MYSQL, Javascript.

Education

- Bachelor's Degree — Ho Chi Minh City University of Technology (2012–2017)
