CV-042

Senior Data Scientist

Uber · United States · Data & AI

Skills

Machine Learning, PyTorch, JAX, Scikit-Learn, Xgboost, LightGBM, Reinforcement Learning, Policy Optimization, Simulation Environments, Supply Demand Simulation, Dynamic Pricing, Testing Infrastructure, End-to-End Testing, LLM Evaluation, A/B Testing, Drift Detection, Python, PySpark, SQL, Hive, Presto, Automation, Airflow, CI/CD, Model Monitoring, Pipeline Orchestration, GPU Training, Multi-GPU Fine-Tuning, vLLM, AWQ Quantization

Work experience

Senior Data Scientist · Uber

2021-05 – Present

Led end-to-end development of a production LLM-powered agent system - problem framing, modeling, evaluation design, and launch - implementing algorithmic improvements from recent papers in PyTorch and JAX and building extensive test suites to verify solution correctness.
Built complex testing infrastructure on top of large-scale third-party ML codebases, writing end-to-end tests to verify reward function behavior and detect numerical instabilities before release.
Designed an evaluation harness used as a release gate: curated golden question set, LLM-judge scoring calibrated against human…

Senior Data Scientist · The Home Depot

2018-07 – 2021-05

Built SKU- and store-level demand forecasts across a large catalog and national store network (XGBoost/LightGBM, hierarchical time series), modeling seasonality, weather, promotions, and Pro-vs-DIY demand; improved accuracy over the incumbent baseline, feeding replenishment, safety-stock, and allocation decisions.
Developed price-elasticity and markdown-optimization models with Merchandising to balance margin against sell-through, validated through geo-based and A/B tests.
Built an embedding-based hybrid recommender powering "Frequently Bought Together" and project-completion recommendations…

Data Scientist · Nike

2013-04 – 2018-07

Built regional demand forecasts (ARIMA/SARIMA, gradient boosting) with promotion, seasonality, and launch effects; delivered prediction intervals enabling planners to trade off stockout risk against excess inventory.
Developed RFM segmentation and customer lifetime value models used by Marketing for loyalty targeting, measured against holdout groups.
Built a hybrid recommender in PySpark for Nike addressing new-product cold-start; A/B tested model variants and placement to select the production configuration.
Automated Spark/SQL ingestion, retraining, and reporting pipelines in Python…

Education

- Bachelor's Degree — University of Southern California (2007–2011)

Latest: Computer Science — University of Southern California
