CV-046

Data/ML Engineer

Forvia Hella · Vietnam · Data & AI

Skills

Python, SQL, C/C++, FastAPI, REST APIs, Git, Linux, Docker, RAG, LLM application pipelines, hybrid retrieval, ElasticSearch, Qdrant, vLLM, LoRA/PEFT, Microsoft Azure, Azure DevOps, gitlab CI/CD, Github Actions, Kubernetes, GKE, terraform, Prometheus, Grafana, PostgreSQL, Azure SQL Server, Ray, Celery, RabbitMQ, Airflow

Work experience

Data/ML Engineer · Forvia Hella

2026-03 – Present

- Design a data platform for multi-location storage and processing of measurement data for Smart Car Access add-on features.
- Collaborated onsite with engineering teams in Germany to discuss Smart Car Access testing workflows and data-platform requirements.
- Develop data pipelines to collect and process Ultra-Wideband (UWB) sensor measurements for machine learning and analytics workflows.
- Implemented GitLab CI/CD workflows for automated package builds, testing, and deployment.

AI Agent Engineer · Cazoodle Inc.

2025-09 – 2026-01

- Built RAG pipelines for 90, 000+ academic documents, integrating ingestion, PDF processing, embeddings, indexing, and retrieval for LLM-powered applications.
- Developed distributed PDF processing workflows in Python and Ray to scale document preparation.
- Implemented Elasticsearch hybrid retrieval combining semantic and keyword search to provide relevant context to LLMs.
- Integrated MinIO document storage with processing and retrieval components; maintained version-controlled workflows and resolved ingestion, retrieval, and performance issues.

Machine Learning Engineer · Joblogic Service Management

2025-04 – 2025-10

- Deployed containerized ML services with FastAPI and Docker, using Azure DevOps CI/CD for delivery and Prometheus/Grafana for monitoring.
- Built Python and SQL ETL workflows from Azure SQL Server into a Bronze/Silver/Gold architecture on Azure Blob Storage for ML training and evaluation.
- Automated retraining with Celery and RabbitMQ and tracked model versions using MLflow.
- Developed and evaluated XGBoost and CatBoost models to predict quote conversion probabilities for business decision-making.

AI Engineer · IVS Joint Stock Company

2023-06 – 2024-07

- Built Selenium and BeautifulSoup crawling workflows to collect 26, 390 healthcare questions for NLP datasets.
- Developed clinical text cleaning, normalization, validation, and annotation workflows to support training and evaluation.
- Fine-tuned LLaMA2 and PhoGPT for medical question answering using LoRA/PEFT and iterative evaluation.

AI Research Assistant · Brain AI Lab, International University, VNU-HCM

2021-10 – 2025-03

- Built clinical imaging models with PyTorch, CNNs, and ResNet, achieving approximately 90% validation accuracy.
- Developed normalization and augmentation pipelines; used MLflow for experiment tracking, model versioning, and artifact management.
- Deployed ONNX models as Docker-based FastAPI inference services on lab servers.

Education

- International University, Vietnam National University - Ho Chi Minh City (2020–2025)
