Product Manager — WMS & Warehouse Integrations

Remote · full time

Why this role exists

The client is an AI-powered fulfilment and logistics ecosystem built for fast-growing e-commerce brands. From one platform, merchants run global fulfilment, cross-border shipping, and AI logistics intelligence, with AI reducing errors, lowering costs, and continuously optimising fulfilment and shipping as they scale globally. The ecosystem is deliberately flexible: the client operates its own WMS for the warehouses it works with, and connects partner warehouses and external WMS systems through the same platform.

Warehouse-side demand is growing fast: fulfilment accounts, white-label deals, and WMS-shaped RFPs from prospects. The WMS domain now needs one dedicated owner: our own WMS, the partner WMS integrations, and the Fulfillment API contract that connects any warehouse to the platform.

Scope of ownership

- All WMS product work, end to end: roadmap, PRDs, sizing with engineers, sprint delivery, QA of WMS flows.
- The whole WMS domain, current and future: our own WMS, partner warehouses and their WMS systems, and the evaluation of new WMS partners or a next-generation in-house build.
- WMS delivery management day to day: integration specs, sync reliability (WMS to OMS inventory mirrors), bug escalations with evidence, release coordination with the warehouse and the WMS development team.
- Warehouse-flavoured commercial support: WMS RFP gap analyses and feasibility answers for Sales on "can the warehouse do X".

What the job is day to day

- Turn warehouse and fulfilment asks into scoped, sized cards engineers can pick up, and run them through the two-week sprint cadence.
- Own inbound/outbound/inventory flows: receiving orders, pick-pack, dispatch, returns, carton and serial-number handling, and inventory reconciliation between WMS and OMS.
- Manage the WMS development team hands-on: reproduce issues, bring log and database evidence rather than symptoms, push for root-cause fixes over per-record patches, and keep a written record of every open issue and commitment.
- Sit between warehouse operators, the WMS development team, merchants, and the client's engineers, and keep all four aligned in writing.
- QA the flows yourself before they ship.

Requirements

- 3+ years product management on logistics, fulfilment, warehouse, or supply-chain software (WMS, OMS, 3PL platform, or adjacent).
- Has shipped integration-heavy product: APIs, webhooks, vendor systems, data sync between platforms.
- Technical fluency: can read a technical spec and hold their own in an engineering discussion about states, syncs, and edge cases.
- Evidence-first working style: verifies against logs, data, and code before asserting; claims come with proof attached.
- Clear, structured written English documentation.
- Self-sufficient operator: runs the WMS scope end to end without needing day-to-day direction. Escalates decisions, not tasks.
- Collaboration fit: works transparently, decisions recorded in writing, no silo-building.

Nice-to-haves

- Direct WMS vendor-management experience, from the implementation side or the vendor side.
- Has run warehouse ops or worked physically close to a warehouse floor.
- Has run a build-vs-buy evaluation or vendor RFP process before.
- Uses AI tools as a working method (specs, QA planning, analysis), not just chat.
- Written Chinese (strong plus: warehouse operations and the WMS development team communicate in Chinese).

Reporting and interfaces

- WMS priorities are set together within the product roadmap with the team.
- Works daily with: platform engineers, the WMS development team, warehouse partners, BD on warehouse-shaped deals, and CS on fulfilment escalations, and with the owners of adjacent scopes wherever a

WMS change integrates with shipping, billing, or the merchant app.

First 90 days (success looks like)

- Owns our WMS, its development-team relationship, and the WMS-to-OMS inventory-sync reliability queue outright, as the single point of contact.
- Ships one warehouse-side improvement end to end through the sprint process, including dry-run and warehouse sign-off.
- Delivers the WMS platform recommendation (evolve our current WMS, adopt a new partner, or build next-generation in-house), with an evaluated shortlist and evidence.
- Produces the WMS integration playbook: how a new warehouse or vendor gets connected, with gates and tests, built on the Fulfillment API contract.
- Is the person Sales routes every "can the warehouse do X" question to.

Senior Product Manager

Shopee International · Indonesia

Hired for: Product Manager — WMS & Warehouse Integrations

Skills

Confluence, JIRA, Agile, Analytics (Firebase), API, Python, Figma, AI productivity tools, SDLC

Work experience

Senior Product Manager · Shopee International

2022-09 – Present

Launched an integrated return & refund logistics flow that improved buyer retention in the fashion category by +2pp in one market.

Built and deployed a cross-border tax compliance module integrated with 3PL systems and a national tax infrastructure, ensuring full regulatory compliance without disrupting order processing.

Led development of a parcel weight library for logistics finance, reducing reconciliation discrepancies with logistics partners and minimising logistics cost leakage (overpayment risk).

Senior Product Owner · Serasi Autoraya (Astra)

2021-08 – 2022-09

Co-led with an external strategy consultancy to define the 5-year product roadmap for the company's Fleet Management System 2.0, approved by the managing director and board.

Redesigned and revamped the Driver App, launched a Beta tested in real operations; the app was more intuitive for drivers with limited tech skills, leading to a 55% increase in effective usage, higher adoption and reduced churn.

Program Manager (CEO Office) · True Digital Indonesia

2021-01 – 2021-08

Centralised KPI reporting across divisions to improve performance visibility for leadership.

Optimised content acquisition by focusing on high-ROI content, reducing marketing costs by 15% while maintaining viewership for 1 million monthly users.

Senior Product Manager · OYO Rooms Indonesia

2019-02 – 2021-01

Delivered an in-house digital signing feature for the sales team CRM platform that enabled contract signing during COVID-19, with over 60% adoption since launch.

Shaped subscription activation, recurring billing & payment collection capabilities to increase partner adoption and recurring revenue.

Promoted to Lead in July 2020 after a Top Performer annual review.

Project Manager · Unistellar Global Korporea

2018-03 – 2019-02

Oversaw investment portfolios, monitored performance, identified risks, and developed strategies.

Project Manager · BenQ Asia Pacific Corporation

2016-10 – 2017-10

Aligned cross-functional teams to deliver marketing projects on time and within scope.
