Data Engineer

Kuala Lumpur, Malaysia · full time

Job Title: Data Engineer

Job Type: Full-time, Permanent

About the Opportunity

Our client, a dynamic multinational company, is establishing a new global data engineering team to champion their diverse digital initiatives and large-scale data projects. This is a ground-floor opportunity to join a creative, motivated, and results-driven team in a role that offers a fantastic work-life balance.

This position is crucial for building and scaling the company's data analytics capabilities. They are seeking a talented Data Engineer who is passionate about data and enjoys collaborating in a fun, high-impact environment.

Key Benefits & Perks

- Work-Life Balance: Hybrid work model (2 days work-from-home) and flexible shifts (e.g., 8:00-4:30, 9:00-5:30, 10:00-6:30).
- Compensation: Competitive salary, double pay, performance bonus, and overtime pay.
- Leave: Generous 14-20 days of annual leave.
- Health: Comprehensive medical, dental, and life insurance.
- Work Week: Standard five-day work week.

Core Responsibilities

- Architect, implement, and maintain the company's core data platform and innovative data solutions.
- Design, construct, and automate robust, modern data pipelines and real-time data streams.
- Develop and manage data models and schemas to facilitate efficient data integration and analysis.
- Proactively monitor, optimize, and troubleshoot ETL/ELT processes, identifying and implementing improvements to enhance performance and efficiency.
- Collaborate closely with data analysts, data stewards, and business stakeholders to translate functional requirements into technical specifications.
- Ensure high data quality and accuracy by performing rigorous data profiling, cleansing, and validation.
- Evaluate the performance and suitability of new data tools and technologies against business requirements.
- Contribute to related data initiatives, including data quality improvements and data education programs.

Required Qualifications

- Degree holder in Computer Science, Information Technology, or a relevant discipline.
- A minimum of 3 years of dedicated experience in data engineering.
- Expert-level proficiency in SQL is mandatory.
- Hands-on experience with Azure Databricks or Azure Synapse.
- Strong programming skills in a data-focused language (e.g., PySpark, Python, R, Java, Scala).
- Proven experience designing and deploying data applications on cloud solutions, specifically Azure.
- Excellent problem-solving skills and a strong data-driven mindset.
- Self-motivated, with the ability to work independently and as part of a collaborative team.
- Good communication skills in both written and spoken English.
- Willingness to travel as needed.

Preferred Qualifications (Advantages)

- Professional certification, such as Azure Data Engineer Associate.
- Knowledge of the wider Azure ecosystem (Azure Data Factory, Azure Data Lake, Azure Event Hub) or Power BI.
- Experience in performance tuning and code optimization within Azure Databricks or Synapse.
- Experience preparing data for data science and machine learning models.
- Familiarity with DataOps principles.
- Prior experience working as part of a distributed global team.

How to Apply

To apply for this exciting opportunity, please submit your detailed resume for review.

Data Engineer

BP · Malaysia

Hired for: Data Engineer

Skills

Python, SQL, Airflow, Apache Kafka, Spark Structured Streaming, Azure Databricks, Delta Lake, Azure Logic Apps, GitHub Actions, Azure DevOps, Power BI, Azure Data Factory, SQL Server, Svelte, Django REST API, Docker, Java, Scala, JavaScript, C++, Shell Scripting, Spring Boot, Spring Framework, Hibernate, Web Services, RESTful APIs, Hadoop, ETL/ELT Processes, PostgreSQL, MySQL

Work experience

Data Engineer · BP

2022-03 – Present

- Architected scalable ingestion solutions for a plant integrity system using Python, SQL, and Airflow; ensured 99.9% data uptime via delta-based checkpointing and auto-replay mechanisms.
- Designed and maintained real-time streaming pipelines using Apache Kafka, Spark Structured Streaming, and Airflow, delivering sub-5s data latency for critical asset monitoring and anomaly detection.
- Implemented the Medallion Architecture (Bronze, Silver, Gold) in Azure Databricks with Delta Lake for refinery and sensor data.
- Led cloud cost optimisation (Delta partitioning, Z-Ordering, autoscaling clusters), achieving a 25% reduction in compute/storage costs.
- Automated workflows using Azure Logic Apps; CI/CD with GitHub Actions and Azure DevOps, reducing manual workload by 80%.
- Architected …

Data Engineer (contract) · BASSnet

2020-01 – 2021-12

- Developed modular ETL pipelines in Azure Data Factory integrating hybrid-source systems, improving data delivery timelines by 30%.
- Designed Delta Lake-based transformations with schema evolution and audit trails for streaming and batch processes.
- Refactored legacy ETL into reusable components, cutting processing time by up to 40%.
- Built multi-layer data warehouse models (staging, curated, reporting) on SQL Server and Delta Lake.
- Tuned SQL Server queries (indexing, partitioning, stored procedures) for a 20% query performance improvement.

Full Stack Software Engineer · Sunway Construction Sdn Bhd

2019-01 – 2019-11

- Developed full-stack customer support web applications using Svelte, Django REST API, and Docker for CI validation.
- Contributed across frontend (JavaScript/Svelte) and backend (Python/Django) using GitHub-based workflows.
- Supported DevOps containerisation and API testing using Postman and Docker for staging.

Education

- Degree, Mechanical Engineering — University of Nottingham Malaysia Campus (2011 – 2016)
