Field Service Engineer (FSE)

Singapore, Singapore · full time · SGD 5,000 – 6,000 / month

JOB DESCRIPTION

Job Title: FIELD SERVICE ENGINEER (FSE)

THE ROLE:

We are seeking a motivated and technically skilled Field Service Engineer with hands-on experience in semiconductor wafer fabrication (fab) equipment. The service engineer will be responsible for installation, maintenance, troubleshooting & upgrading of semiconductor process tools to ensure maximum equipment uptime & performance in customer production environment. Good communication skills, spoken & written.

This is a full-time position and reports directly to the Operations Director.

THE IDEAL CANDIDATE:

The ideal candidate preferably has some years of experience in wafer fab sector, either working in the fab or working in a major OEM (Original Equipment Manufacturer) such as Applied Materials (AMAT) or Tokyo Electron Limited (TEL), or in some capacity in the wafer fab production process. Our focus products & services are in the Diffusion & Thin Film (TF) module/dept.

CORE RESPONSIBILITIES:

- Perform installation, qualification & acceptance of company products & services.
- Troubleshoot and resolve on-site technical issues
- Support move-in equipment hook-up phase.
- Document service activities, prepare technical reports & maintain accuracy.
- Ensure service quality and compliance with EHS, and regulatory standards
- Maintain clear communication with customers and internal teams

CRITICAL SUCCESS FACTORS/SKILLS:

- Willingness to learn, with a service-oriented and positive attitude.
- Ability to work independently and as part of a team
- Communication skills to articulate problem statement
- Knowledge of semiconductor wafer fab process
- Major plus if candidate has knowledge of vacuum systems, robotics, pneumatic, etc.

QUALIFICATIONS AND REQUIREMENTS:

- Diploma or degree in either Electrical & Electronic/Mechanical/Chemical engineering, or an equivalence in working related experience
- 2-5 years experience working in semiconductor wafer fab environment is preferred.
- Fresh Graduates are welcome.

BENEFITS & OTHERS:

- Group medical and dental insurance; miscellaneous allowance
- Annual Wage Supplement (AWS) + Variable Bonus (P&L & individual performance)
- OJT
- Work Hours: Monday to Friday, 9:00 AM – 6:00 PM

ABOUT THE CLIENT

The client specializes in used tool sales, RF spare parts repair, and consumable part supply for the semiconductor wafer fabrication industry. Its Singapore-based workshop focuses on RF generator and high-value parts repair, serving key 12" wafer fabs.

With expertise across modules such as Diffusion, Implant, PECVD, CMP, Etch, Wet, Inspect, Metro, AMAT Centura, and TEL Furnace, the client continues to expand its technical capabilities and industry footprint.

The client is expanding rapidly and looking for dynamic team members who want to grow in this high-tech industry.

Field Service Engineer

Tokyo Electron Singapore Pte Ltd · Singapore
Hired for: Field Service Engineer (FSE)

Skills

Preventive & Corrective Maintenance, Equipment Troubleshooting & Reliability, Semiconductor Process & Tool Performance, Root Cause Analysis & Continuous Improvement, Cross-functional Collaboration, Leadership & Team Supervision, Engineering Documentation & Reporting, Safety, Quality & Compliance Management, Problem-Solving, Communication

Work experience

Field Service Engineer · Tokyo Electron Singapore Pte Ltd

2024-06 – Present

- Provide on-site installation, troubleshooting, and repair of complex semiconductor equipment.
- Perform preventive maintenance, modifications, and improvement programs to ensure tool performance.
- Serve as key liaison with customers, addressing technical and administrative issues efficiently.
- Coordinate logistics and monitor product performance, providing regular reports and feedback.

Equipment Engineer · STMicroelectronics

2022-05 – 2024-06

- Led preventive maintenance planning and execution for Diffusion Module tools.
- Supervised and trained shift preventive maintenance technicians.
- Collaborated across departments to drive fab quality, service efficiency, and cost performance.
- Managed budgets, audits, and external supplier engagements for tool optimisation.

Technical Specialist · Micron Semiconductors

2016-05 – 2022-05

- Performed tool maintenance, installation, and testing across assigned semiconductor toolsets.
- Troubleshot mechanical, electrical, and process issues using systematic problem-solving.
- Improved tool uptime and process stability through SPC monitoring and proactive maintenance.
- Prepared daily reports and maintained accurate maintenance documentation.

Engineering Specialist · Seagate Technology International Pte Ltd

2014-04 – 2016-04

- Conducted preventive and corrective maintenance for sputter equipment.
- Reduced equipment downtime through effective troubleshooting and repair planning.
- Mentored junior technicians.

Trainer · Singapore Armed Forces

2013-07 – 2014-03

- Planned and conducted training sessions for junior trainers.
- Ensured training safety and operational readiness.

Education

- Associate's Degree, Electrical/Electronic Engineering — Temasek Polytechnic (2017)
- Associate's Degree — Republic Polytechnic (2012)
